- (A) "Diodes, transistors and similar semi-conductor devices" are to be taken to be those devices the operation of which depends on variations in resistivity on the application of an electric field ;
- (B) "Electronic microcircuits" are to be taken to be :—
 - (a) Microassemblies of the "fagot" module, moulded module, micro-module and similar types, consisting of discrete, active or both active and passive miniaturised components which are combined and interconnected ;
 - (b) Monolithic integrated circuits in which the circuit elements (diodes, transistors, resistors, capacitors, inter-connections, etc.) are created in the mass (essentially) and on the surface of a semi-conductor material (doped silicon, for example) and are inseparably associated ;
 - (c) Hybrid integrated circuits in which passive and active elements, some obtained by thin or thick-film technology (resistors, capacitors, inter connections, etc.), others by semi-conductor technology (diodes, transistors, monolithic integrated circuits, etc.), are combined, to all intents and purposes indivisibly, on a single insulating substrate (glass, ceramic, etc.). These circuits may also include miniaturised discrete components.

For the classification of the articles defined in this Note, heading No. 85.21 shall take precedence over any other heading in the Nomenclature which might cover them by reference to, in particular, their function."

SECTION XVI Notes
